ABOUT US

EGARR Marble boasts the most extensive and advanced marble quarries in Turkey. Since our inception, we have maintained an innovative approach and are dedicated to exceeding expectations with our diverse product range.

We operate two quarries in Isparta and Kütahya city in Turkey. In Isparta, we have been extracting three select marble types: Beige, Breccia Beige, and Calacata Beige. Our state-of-the-art cutting machines produce blocks, with a monthly capacity of 2000-2500 tons. We offer these materials in both slab and cut-to size tiles.

Kütahya quarry, on the other hand, has been producing five distinct Onyx selections since 2020, including Aegean Onyx, Blue way, Golden Ivy, Blue Dream, and Ivory Cloud. Our production line here averages 1500-2000 tons per month, available as slabs and cut-to-size tiles.

Our shipments are ongoing, primarily to the Indian, Chinese and European markets, as we aim to expand our reach globally. Our overarching goal is not only economic growth but also contributing to a sustainable world through environmentally friendly practices and impactful social responsibility projects that touch lives across our nation.

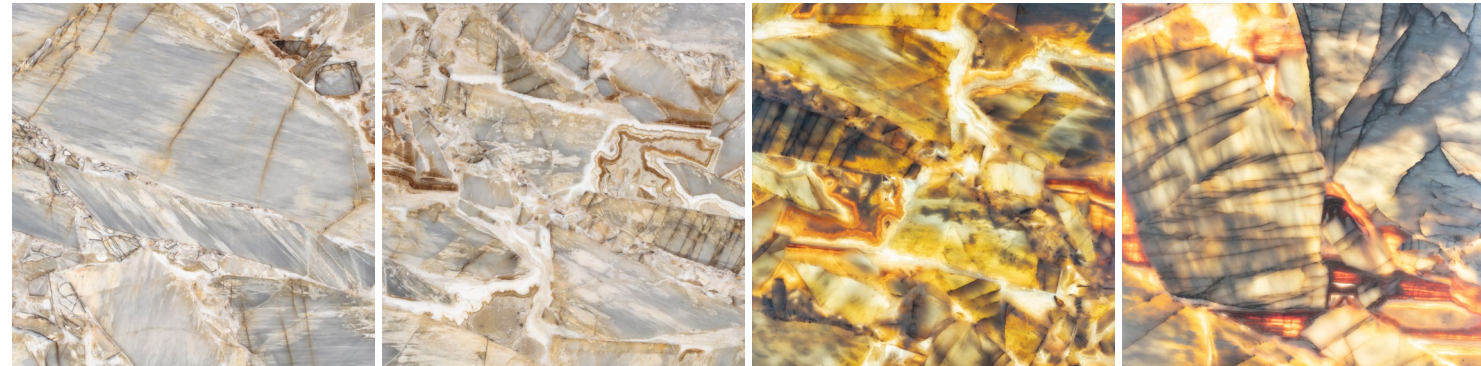

As Egarr marble, our primary goal is to be a company that mentions its name with its quality and reliability in the sector with its highly motivated, professional, employees who add value to the workplace.
